State of Healthcare Industry Today

The corona virus outbreak has significantly impacted the healthcare providers operating with outpatient setting. Number of patients availing outpatient services have drastically reduced and in parallel there has been surge in number of telemedicine and at-home service appointments booked. Individuals today prefer to avail the services in comfort and safety of their home and this has become new normal across various other industries including healthcare.

With this change in dynamics, there is a need for healthcare providers to adapt newer technologies and business models to bring their services right at the doorstep of their patients.

68%

drop in overall visits to avail outpatient care

38x

growth in number of telemedicine appointments post outbreak

\$90.12B

is size of US Home healthcare services market as of 2021

Who We Serve

We are working with Healthcare Providers and State Governments to bring their services to the doorsteps of their consumers. Reach out to us and let's discuss benefits and value that Housptl can add to your institution.

Services

What We Do

Housptl works with hospitals, nursing homes and labs that want to deliver their healthcare services at-home or through telemedicine to their patients. The platform allows patients to seamlessly book appointments or place orders for a lab test through a mobile app with easy and clean interface.

Additionally, it allows patients to receive real time location notifications when a healthcare provider is on the way to provide service.

Our technology platform has also been deployed to practices who are working closely with State Governments in USA in assisting mass vaccination against COVID-19.

With surge in number of at-home vaccinations requested by our patients, we were looking at a reliable technology solution that would help us manage all field operations and even give flexibility to provide teleconsultation before scheduled visits. Housptl made this possible.

Chris, Chief Operating Officer
At large practice providing
at-home health services

Case Study

At a glance

A large vaccine provider partners with Housptl to automate the COVID vaccination delivery process for their patients at their home along with conducting pre-vaccine consultation

>250
Vaccinators

>50000
Vaccines Facilitated

Challenges

Working with State Governments in US for providing COVID Vaccinations, Our Client, a large vaccine provider was looking for a platform that could help them manage large volumes of vaccine appointment bookings and to reach out to their patients at their home for providing vaccinations.

Solutions

Housptl allowed patients of our Client to book services from the web and through the mobile app and track real-time status on their booking,

Benefits

1

Managing appointments at ease

Patients have access to mobile app for both Android and iOS environment allowing them to book COVID vaccine and testing appointments on the go

2

Real time statuses for Patients

Our Client is able to update their patients real-time when a healthcare provider is assigned and even give live location status of their providers

3

Teleconsultation

Housptl enables our Client's patients to instantly schedule a video call with their care providers

What We Offer

Patient App

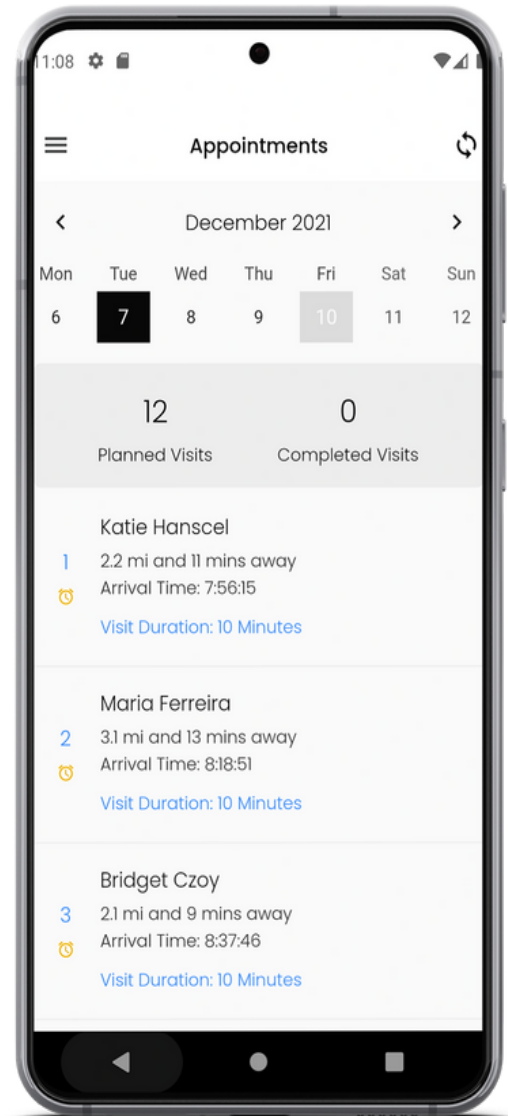

Allows patients to book services with ease and track exactly where their healthcare professional is. This easy-to-use app allows your patients to take charge of their health by managing their consultation history, follow-ups and results, all at their fingertips.

Care Provider App

The Care Provider app is installed on your healthcare professional's mobile device. The mobile device is then used as a check-in system and incorporates a location tracking software within to ensure maximum efficiency for at-home appointments.

Control Panel

The state-of-the-art Control Panel allows healthcare providers to manage all aspects of patient care from beginning to end including managing full patient profile, attending video calls and route optimization. Control panel is also ready to integrate with any EHRs that follow REST protocol for integrations.

Feature Highlights

Patient App

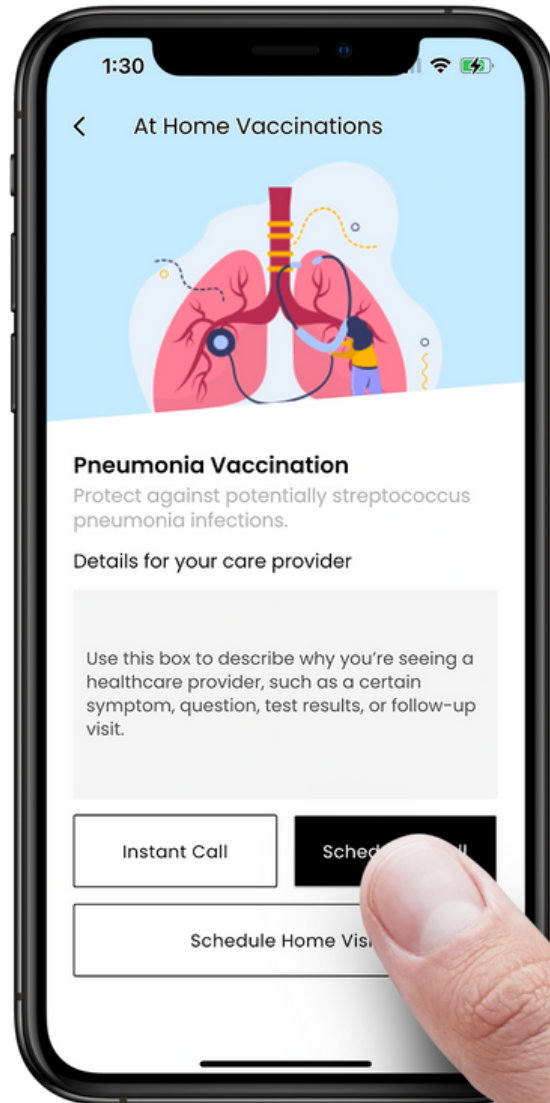

- Appointment Management
- Book Vaccinations
- Order Lab Tests
- Doctor Teleconsultation
- Real-Time Provider Location Tracking
- Receive Reports
- Push Notifications
